

Thymosin Alpha-1 10mg Easy Pen

RESTORE IMMUNITY, FIGHT INFECTION
AND REGAIN BALANCE

Easy Pen

Thymosin Alpha-1 (TA1) is a naturally occurring peptide that supports immune regulation and resilience. Research suggests it enhances T cell and NK cell activity, improves response to infections, and helps restore balance in immune-suppressed or chronically inflamed individuals. Unlike stimulants, TA1 modulates immunity without triggering excess inflammation.

It has been studied globally for hepatitis, cancer, sepsis, and immune dysfunction, and shows potential in boosting vaccine response and supporting recovery in viral and autoimmune conditions.

Key Potential Benefits

- **Immune System Strengthening** – Enhances T cell activity, supports NK cell response, and improves immune coordination against viruses, bacteria, and tumors.
- **Antiviral Support** – Shown to improve outcomes in viral infections like hepatitis B/C, HIV, and influenza; used in clinical trials for COVID-19.
- **Vaccine Response Booster** – Increases vaccine efficacy and immune response in immunocompromised individuals.
- **Cancer Immunotherapy Support** – Boosts anti-tumor immune activity and improves survival when used alongside chemotherapy or checkpoint inhibitors.
- **Autoimmune & Inflammatory Modulation** – Calms chronic inflammation without suppressing the immune system, beneficial in conditions like psoriatic arthritis or lupus.
- **Recovery from Immune Suppression** – Helps restore immune health after illness, surgery, chemotherapy, or chronic stress.
- **Mood & Fatigue Improvement** – Early studies suggest benefits in reducing immune-related fatigue and depressive symptoms.

Technical Information:

CAS Number: 62304-98-7

PubChem CID: [16130571](#)

Formula: C129H215N33O55

Specifications:

- 0.05mg per click.
- Up to 60 clicks per dose.
- Includes 4 needles and one adjustable dosage pre-mixed pen.
