**ACHIEVE A NATURAL-LOOKING TAN,
BOOST LIBIDO, AND EXPERIENCE
ENERGY BENEFITS**

Easy Pen

Melanotan II is a synthetic peptide that mimics α -MSH, stimulating melanin production for a deeper tan without UV exposure. It also interacts with melanocortin receptors linked to libido, energy, and appetite control.

Studies suggest it may enhance sexual function, reduce appetite, and support metabolic balance. Its broad receptor activity makes it popular for cosmetic and functional research. Melanotan II offers a unique blend of aesthetic and performance benefits, combining skin pigmentation, energy support, and sexual wellness in one compound.

Key Potential Benefits

- **Sunless Tanning** – Stimulates melanocytes via MC1 receptor activation, offering a customizable tan without sun damage. Fast-acting and UV-responsive for deeper pigmentation.
- **Enhanced Libido & Sexual Function** – MC4 receptor stimulation has been shown to increase erectile strength, duration, and sexual desire in men; also enhances arousal in women.
- **Reduced Appetite & Weight Control** – Often leads to appetite suppression and modest weight loss via MC4 activation, aiding in overall metabolic wellness.
- **Increased Energy & Mood** – Commonly reported side effects include increased energy, reduced fatigue, and mild warming sensation—ideal for active individuals.

Technical Information:

CAS Number: 2023788-19-2

PubChem CID: [92432](#)

Formula: C50H69N15O9

Specifications:

- 0.06mg per click.
- Up to 60 clicks per dose.
- Includes 4 needles and one adjustable dosage pre-mixed pen.
