**NATURALLY ELEVATE GROWTH HORMONE
& IGF-1 TO BOOST LEAN MUSCLE,
FAT LOSS AND SLEEP QUALITY**

Oral

MK-677 is an oral growth hormone secretagogue that mimics ghrelin to boost natural GH and IGF-1 levels—key hormones for muscle growth, fat loss, recovery, and vitality. It works by stimulating the hypothalamus and pituitary without suppressing natural hormone production.

Taken once daily, MK-677 promotes lean mass, deeper sleep, tissue repair, and metabolic health. Originally studied for GH deficiency and muscle wasting, it's now researched for performance and anti-aging support. Use remains investigational and should be supervised by a medical professional.

Key Potential Benefits

- **Increases GH & IGF-1 Naturally** – Sustains elevated hormone levels similar to youthful profiles without suppressing natural production.
- **Builds & Preserves Lean Muscle Mass** – Clinically proven to increase fat-free mass, even in calorie-restricted or elderly individuals.
- **Accelerates Recovery & Joint Repair** – Promotes collagen synthesis and cellular repair for faster recovery from training or injury.
- **Improves Deep Sleep & Recovery Hormones** – Enhances REM and slow-wave sleep phases, leading to better recovery and hormonal balance.
- **Supports Fat Loss & Metabolism** – GH promotes lipolysis and improved energy utilization without stimulating appetite excessively.
- **Neuroprotective & Anti-Aging Support** – IGF-1 is associated with brain health, cognitive resilience, and neurogenesis in aging populations.
