

Ipamorelin 9mg Easy Pen

**ENHANCE RECOVERY,
LEAN MASS, SLEEP & VITALIT**

Easy Pen

Ipamorelin is a highly selective growth hormone secretagogue that mimics the body's natural ghrelin signal to boost GH release without increasing cortisol, prolactin, or stress hormones. It promotes natural GH pulses, supporting IGF-1 production for muscle growth, fat loss, recovery, and cellular repair.

Unlike older peptides, Ipamorelin is clean and targeted, aiding in deep sleep, tissue healing, and metabolism with minimal side effects. Its precise action makes it a promising option for those seeking safe and effective growth hormone support.

Key Potential Benefits

- **Lean Muscle Growth** – Promotes steady GH release that supports protein synthesis and lean muscle gains (average +16–27% weight gain in animal studies)
- **Fat Loss & Metabolic Boost** – Increased GH promotes lipolysis and improved body composition, especially when combined with exercise and protein intake.
- **Improved Recovery & Tissue Repair** – GH supports collagen production and tissue regeneration, aiding post-exercise and injury recovery.
- **Better Sleep Quality** – Many users report deeper slow-wave sleep and enhanced sleep patterns within weeks.
- **No Cortisol or Prolactin Increase** – Unlike other GHRPs, ipamorelin stimulates GH only, no cortisol or prolactin spikes.
- **Fewer Hormonal Side Effects** – Gentle, well-tolerated stimulation with minimal risk of endocrine imbalances.

Technical Information :

CAS Number: 170851-70-4

PubChem CID: [9831659](#)

Formula: C38H49N9O5

Specifications:

- 0.03mg per click.
- Up to 60 clicks per dose.
- Includes 4 needles and one adjustable dosage pre-mixed pen.
